

CHAPTER III

RESEARCH METHOD

This chapter discusses about research design, instruments, data collecting and data analysis.

A. Research Design

The design of the research will be descriptive qualitative which aims at investigating the realization of parataxis and hypotaxis in clause complexes found in the conclusion of students “skripsi” written by students of English Education Department of Muria Kudus university in April 2017 graduation period.

B. Data and Data Source

The data of this research will be parataxis and hypotaxis constructed in clause complexes which are found in the conclusion of “skripsi” written by the students of English Education Department of Muria Kudus University in April 2017 graduation period. The data source will be the conclusion of “skripsi” written by the students of English Education Department of Muria Kudus University in April 2017 graduation period.

C. Data Collecting

The steps of collecting the data are:

1. Determining the “skripsi” conclusions which are used as the data source

In this first step, the researchersI will determine the “skripsi” conclusions which will be used as data source by visiting library and then choose the

“skripsi” intentionally. They will choose the “skripsi” which their conclusion contains infinite clause complexes.

2. Reading

Reading the “skripsi” conclusions, intended not only to comprehend the content of the background, but also to collect the data.

Instrument of this research is taxis checklist.

D. Data Analysis

To analyze data, the writers use non-statistical analysis, they are:

a) Identifying

After reading the “skripsi” conclusions of the students of English Education Department of Muria Kudus University written in April 2017 graduation period, the next step will be identifying them by splitting each clause complex into clauses. Then, the researchers will put them into table and the clauses were analyzed based on the taxis relation whether it is parataxis or hypotaxis.

b) Interpreting

In this step, the researchers will interpret why parataxis or hypotaxis is dominantly used in the conclusion of “skripsi” written by the students of English Education Department of Muria Kudus University in April 2017 graduation period.

c) Explaining

Explaining means giving formulaic reasons based on the theories and the result of the analysis about parataxis and hypotaxis found in the conclusion

of “skripsi” written by the students of English Education Department of Muria Kudus University in April 2017 graduation period.
